

LIFARS USE CASES

INDUSTRY: Global Finance & Investment Company.

SCENARIO: A new platform to manage internal documents and bonus for employees and contractors was being deployed internally and the company wanted to be sure it was secured against real attacks.

LIFARS SERVICES: Network and Web Application Penetration Testing

LIFARS provided the following services to address this rapidly growing client's security and compliance needs:

- Assessed the internal Network/Infrastructure from a threat actor perspective to identify any potential entry point or vulnerabilities that could be exploited where the new application was being deployed.
- Provided detail technical description of the risks and problems identified during the assessment along with remediation steps.
- Assisted the client through remediation process and provided a post-remediation assessment to ensure adequate security posture.

RESULTS: A strong network and Web Application that can defend against most common attack scenarios.
